

Welcome to Ryde East Public School Kindergarten
Expo

Science, History and Geography

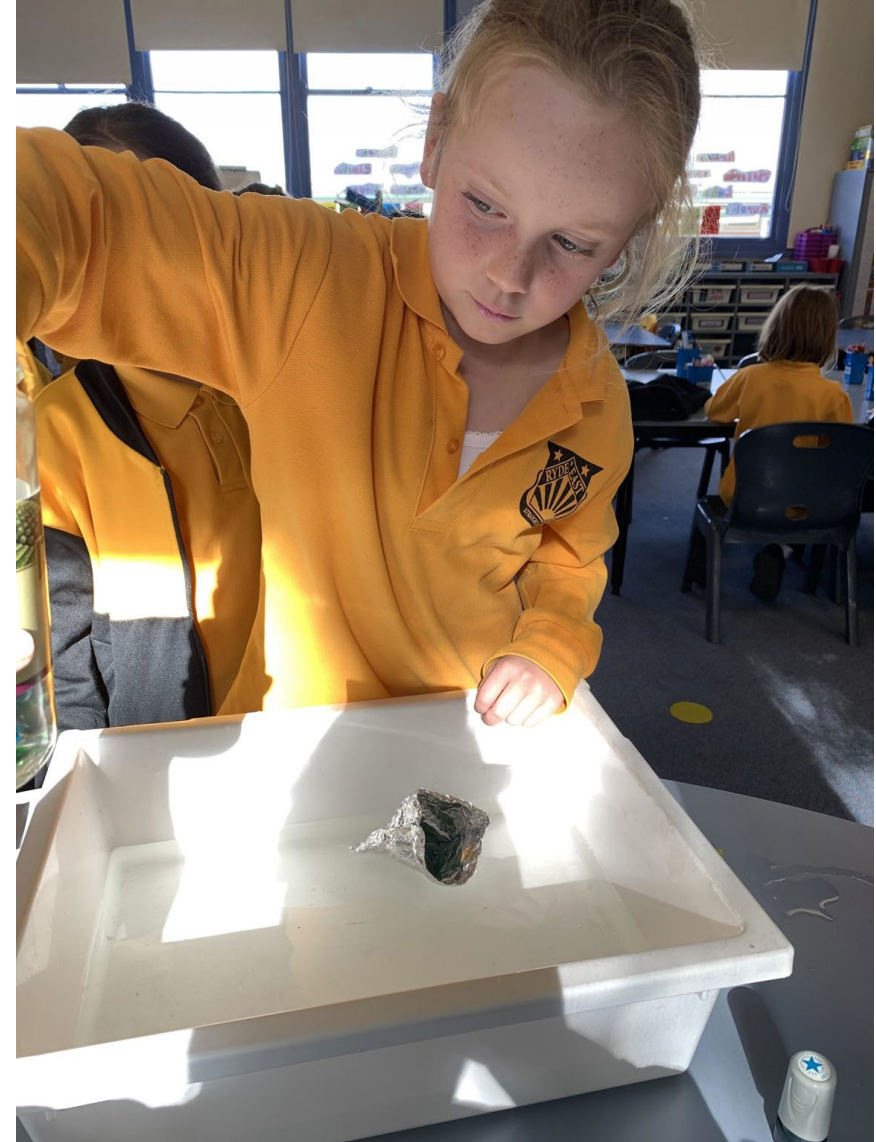

Education
Public Schools

Science

Kindergarten explore the living world and the way animals and plants grow and change. They use their investigative skills to observe the world around them to note changes in weather and how it impacts their daily life and the life of animals through hibernation and migration. Students get to test a range of different materials to observe their properties. They explore floating and sinking whilst observing materials that are waterproof. Students collaborate with their peers and use the design process to find solutions to everyday problems.

Science

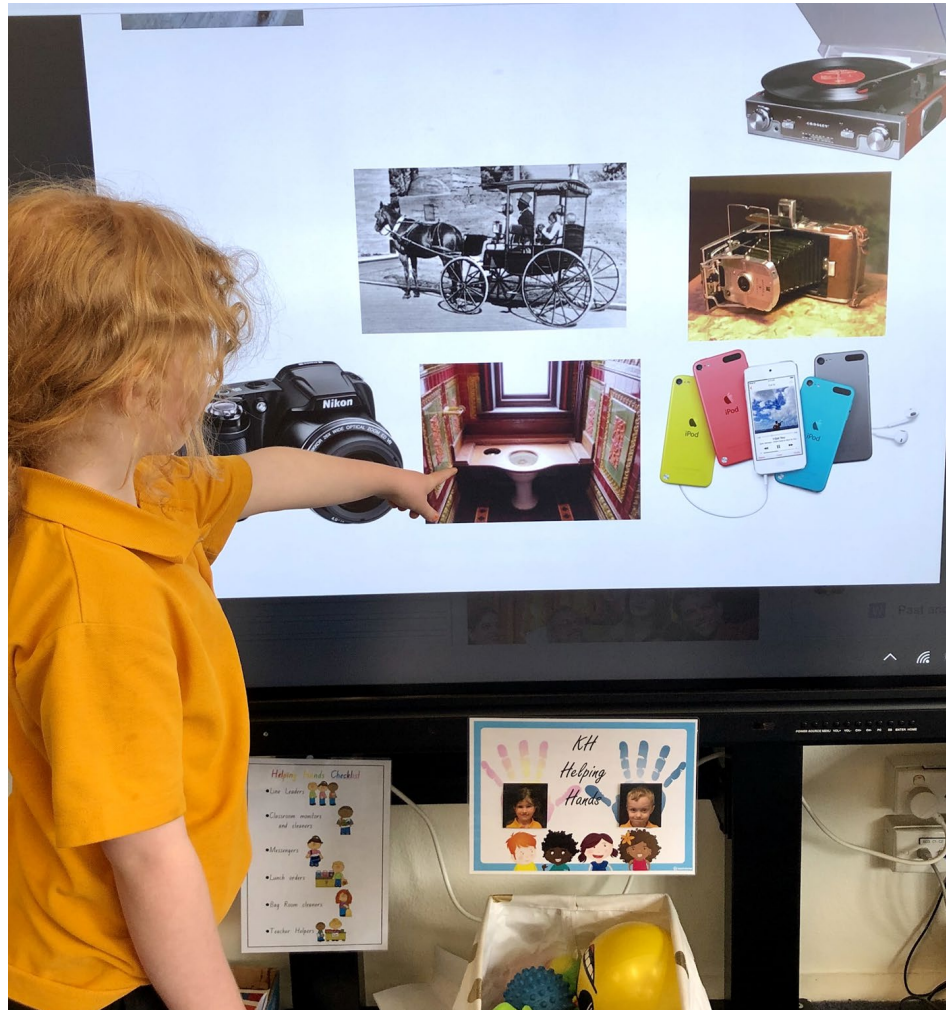

Excursion Sydney Zoo

History

In history, Kindergarten students get to compare the past to the present.

Students compare their family heritage with others and learn to identify similarities and differences between their families.

They look at objects from the past and the present, comparing their features and looking at how things have changed over time.

Geography

Through research and observation, students in Kindergarten learn to identify familiar places and understand why places are special and why we must care for them.

Students have the opportunity to look at maps, use technology to represent our local environment and go on local walks to observe what is in our local environment.

Enrol Now

Enrolments are open!

Contact our school office via phone or email to arrange a **COVID safe** completion of enrolment papers.
